DETAILED ACTION

1. Claims 1, 3-8, 10-12, 14-19, 30, and 32-35 are pending. Claims 1, 8, 11, 12, 16, 18, 30, 32, 34, and 35 have been amended in this communication filed 09/14/06 entered as Response After Non-Final Action.

Claim Objections

2. Claims 1, 8, and 12 are objected to because of the following informalities: Claim 1, lines 10-18 and lines 23-29 recite “responsive to said receiving ...; ...; responsive to said ..., ...; if said new data record ...; ...; otherwise, ranking ...; ...; if said sum ...; and if said sum ...”. These steps are in improper method claim format. The steps in claim 1 in order to be in proper method claim format should recite as follows: “identifying one of the sections based upon the associated key of the new data record in response to said receiving said new data record and said associated key; identifying one of the sections in response to determining said ...; storing said new data record in identified section if said new data record fits in unused storage space and ending the process; ranking all data records in said section ...; ...; ending the process by returning a failure indicator, indicating ... if the sum is not greater than said size of the new data record; and deleting one or more data records from the identified section ... at the end of the identified section if said sum is greater than said size of said new data record”. Claims 8 and 12 have a similar problem. Appropriate correction is required.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 1, 8, 12, and 30 are rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential elements, such omission amounting to a gap between the elements. See MPEP § 2172.01. The omitted elements are: Claim 1, beginning at line 12 should recite "identifying one of the sections based upon the associated key of the new data record, determining if ...; storing said new data record if based on the size if new data record fits in said unused storage space in said identified section and ending the process; ranking all data records in said identified section according to a computer implemented ranking function if said new data record does not fit in said unused storage space; ...; ending the process ... in the identified section if said sum is not greater ...; and deleting one or more data records ... the end of the identified section if the sum is greater than ...". Claims 12, and 30 have a similar problem.

Claims 5-6 recite the elements of a system or apparatus claim and the preamble recites a computer implemented method. Thus the claims cross two separate statutory classes of invention. Furthermore, "computer-implemented" can be deleted from the preambles of claims 3-7 in view of the recent *In re Lundgren* decision. The preamble of claims 3-7 should recite "the method of claim 1".

For example claim 5 would be better recited as "The method of claim 1, wherein each of ... used to transfer data between a primary storage ...". Claim 6 can be written similar to claim 5. Claim 7 can recite "The method of claim 1, allocating a contiguous

memory space to contain each of the sections, wherein each of the sections is about the same page size.

Claims 3-7, 10, 11, 14-19, and 32-35 are also rejected because they depend from a rejected base claim.

Conclusion

5. The application will be in condition for allowance once the claim objections and the 35 USC 112 second paragraph rejections have been resolved if there not any other outstanding claim issues and an updated search does not produce any prior art to reject the claims.
